

Bolt.Vision

Bolt.VisionConnector

BOLT-VISION-CONNECTOR

4 or 8 cameras. Keep the ones on the wall.

Sits on the LAN and talks ONVIF to the cameras already there. Detection runs on the box, so the network stays quiet and the cloud storage you sell lasts longer.

It keeps HD footage on site and sends events and verified clips to the Bolt cloud, so you hear about what happened, not every leaf that blew past.

- Works with the cameras you have.
- HD footage kept on site.
- Fanless and silent.
